COX-I and COX-II activity in vitro:

(i) Test Method:

a. Preparation of the recombinant cyclooxygenase (COX)

The human cyclooxygenase COX-I and COX-II were expressed in transfected Chinese hamster ovary (CHO) cells. Monolayer cultures of semi-confluent CHO cells stably expressing COX-I and COX-II were washed twice and scraped into phosphate buffered saline (PBS). The cells were centrifuged at 200 x g for 5 minutes and the cell pellet was sonicated in reaction buffer containing 100 mM Tris-HCl (pH 7.4), 2 μ M hematin and 5 mM tryptophan. Broken cells were centrifuged for 5 minutes at 1700 x g at 4°C and the supernatants were used as crude

enzymes.

Cyclooxygenase activities in the absence or presence of inhibitors were measured by determining the level of prostaglandin E_2 (PGE_2) synthesis from arachidonic acid. Enzymes (1 μ g for COX-I and/or 3 μ g for COX-II) in a total volume of 200 μ l of reaction buffer were incubated in the absence and presence of various concentrations of inhibitors for 5 minutes at 30°C. The reaction was then started by the addition of arachidonic acid to the final concentration of 10 μ M. The reaction was terminated by 50 μ l of HCl (1N) after incubation at 30°C for 5 minutes.

PGE_2 was extracted with ethyl acetate, concentrated under a stream of nitrogen and analyzed by a radio immunoassay kit (Amersham) according to the manufacture's instructions.

b. Assay for human recombinant COX-I and COX-II activity

COX activity was assayed as PGE_2 formation using radioimmunoassay to detect the prostaglandin release. The appropriate COX enzyme was incubated in 0.1 M Tris-HCl buffer (pH 7.3) containing hematin and tryptophan with the addition of arachidonic acid (10 μ M) for 5 minutes at 37°C. Compounds were pre-incubated with the enzyme for 5 minutes prior to the addition of arachidonic acid. Any reaction between the arachidonic acid and the enzyme was stopped after 5 minutes at 37°C by addition of 20 μ l of 1N HCl. PGE_2 formation was measured by radioimmunoassay (Amersham).

Preparation 1

A mixture containing 1-[4-(methylthio)phenyl]-4,4,4-trifluorobutane-1, 3-dione (8.0 g), (3-chloro-4-methoxy)phenylhydrazine hydrochloride (6.4 g) and acetic acid (45 ml) was stirred at 100-110°C. After 3 hours, the reaction mixture was concentrated in vacuo. The resultant residue was partitioned between ethyl acetate and water. The organic layer was separated, washed with water and dried over magnesium sulfate. Evaporation of the solvent under reduced pressure gave an oil (11.5 g). The obtained product was used for next reaction without purification.

This oil was dissolved in dichloromethane (100 ml), and 3-chlorobenzoic acid (80%, 5.92 g) was added to this solution over a period of 15 minutes at an ice-bath temperature. After being stirred for 1 hour, the reaction mixture was diluted with dichloromethane (50 ml) and then washed with aqueous sodium carbonate solution (40 ml x 2) and brine. The organic layer was dried over MgSO_4 and evaporated under reduced pressure. The resulting residue was purified by column chromatography on silica gel eluting with ethyl acetate to give 1-(3-chloro-4-methoxyphenyl)-5-[4-(methylsulfinyl)phenyl]-3-(trifluoromethyl)pyrazole (8.95 g) in 71% yield.

Example 1

A mixture containing 3-chloro-1-(3-chloro-4-methoxyphenyl)-5-[(methylsulfinyl)phenyl]pyrazole (2.5 g), sodium acetate (2.0 g) and

acetic anhydride (30 ml) was stirred at reflux temperature for 4 hours. The reaction mixture was cooled and the insoluble materials were removed by filtration. Toluene (50 ml) was added to the filtrate and then the mixture was concentrated under reduced pressure. To the residue was added toluene (50 ml), and again the reaction mixture was evaporated under reduced pressure. The resulting residue was purified by column chromatography on silica gel eluting with dichloromethane to give 5-[(acetoxymethylsulfinyl)phenyl]-3-chloro-1-(3-chloro-4-methoxyphenyl)-pyrazole as a synthetic intermediate. To the intermediate in a mixed solvent of dichloromethane (20 ml) and methanol (10 ml) was added magnesium monoperoxyphthalate (6.8 g) with stirring at an ice-bath temperature. After the addition was completed, the reaction mixture was allowed to warm to room temperature and stirred overnight. The reaction mixture was diluted with dichloromethane (100 ml) and then washed successively with water, aqueous sodium carbonate solution and brine, and dried over MgSO_4 . The evaporation of the solvent gave a gummy oil, which was crystallized in ethanol and collected by filtration to give 5-[4-(acetoxymethylsulfonyl)phenyl]-3-chloro-1-(3-chloro-4-methoxyphenyl)pyrazole (2.4 g) in 80.3% yield. The analytical sample was obtained by recrystallization from ethanol.

To a stirred suspension of NaH (about 60%, 12 mg) in N, N-dimethylformamide (0.3 ml) was added a solution of the 1-(3-chloro-4-methoxyphenyl)-5-{4-[(3-hydroxypropyl)sulfonyl]-phenyl}-3-(trifluoromethyl)pyrazole (147 mg) in N, N-dimethylformamide (0.4 ml) at an ice bath temperature. After 15 minutes methyl iodide (49mg) in N, N-dimethylformamide (0.3 ml) was added to this mixture at the same temperature. After 15 minutes, the reaction mixture was allowed to react at room temperature for 30 minutes. The mixture was diluted with water and then neutralized by addition of aqueous HCl dilute solution, and extracted with ethyl acetate. The extract was washed with brine and dried over MgSO_4 . The evaporation of solvent under reduced pressure gave a gummy oil, which was subjected to a column chromatography on silica gel eluting with a mixed solvent of ethyl acetate and n-hexane (2 : 1). Fractions containing the desired product were collected and concentrated under reduced pressure to give 1-(3-chloro-4-methoxyphenyl)-5-{4-[(3-methoxypropyl)sulfonyl]phenyl}-3-(trifluoromethyl)pyrazole (73 mg).

INTERNATIONAL SEARCH REPORT

International application No.

PCT/JP 99/05289

Box I Observations where certain claims were found unsearchable (Continuation of Item 1 of first sheet)

This International Search Report has not been established in respect of certain claims under Article 17(2)(a) for the following reasons:

1. ☒ Claims Nos.: 10
because they relate to subject matter not required to be searched by this Authority, namely:
Remark: Although claim 10
is directed to a method of treatment of the human/animal
body, the search has been carried out and based on the alleged
effects of the compounds.
2. ☒ Claims Nos.: 1
because they relate to parts of the International Application that do not comply with the prescribed requirements to such
an extent that no meaningful International Search can be carried out, specifically:
see FURTHER INFORMATION sheet PCT/ISA/210
3. ☐ Claims Nos.:
because they are dependent claims and are not drafted in accordance with the second and third sentences of Rule 6.4(a).

Box II Observations where unity of invention is lacking (Continuation of Item 2 of first sheet)

This International Searching Authority found multiple inventions in this International application, as follows:

1. ☐ As all required additional search fees were timely paid by the applicant, this International Search Report covers all
searchable claims.
2. ☐ As all searchable claims could be searched without effort justifying an additional fee, this Authority did not invite payment
of any additional fee.
3. ☐ As only some of the required additional search fees were timely paid by the applicant, this International Search Report
covers only those claims for which fees were paid, specifically claims Nos.:
4. ☐ No required additional search fees were timely paid by the applicant. Consequently, this International Search Report is
restricted to the invention first mentioned in the claims; it is covered by claims Nos.:

Remark on Protest

- ☐ The additional search fees were accompanied by the applicant's protest.
- ☐ No protest accompanied the payment of additional search fees.

FURTHER INFORMATION CONTINUED FROM PCT/ISA/ 210

Continuation of Box I.2

Claims Nos.: 1

Present claim 1 relates to an extremely large number of possible compounds. Support within the meaning of Article 6 PCT and/or disclosure within the meaning of Article 5 PCT is to be found, however, for only a very small proportion of the compounds claimed. In the present case, the claims so lack support, and the application so lacks disclosure, that a meaningful search over the whole of the claimed scope is impossible. Consequently, the search has been carried out for those parts of the claims which appear to be supported and disclosed, namely those parts relating to the compounds according to claim 2.

The applicant's attention is drawn to the fact that claims, or parts of claims, relating to inventions in respect of which no international search report has been established need not be the subject of an international preliminary examination (Rule 66.1(e) PCT). The applicant is advised that the EPO policy when acting as an International Preliminary Examining Authority is normally not to carry out a preliminary examination on matter which has not been searched. This is the case irrespective of whether or not the claims are amended following receipt of the search report or during any Chapter II procedure.
